**Confirmation of successfully completed battery testing
BYD Battery Max Lite with Sunny Island X**

Dear valued customer,

We hereby confirm that the battery "BATTERY-MAX LITE" from manufacturer "BYD" has successfully passed the SMA testing procedure, which is a prerequisite for being officially approved as a qualified battery for our Sunny Island X battery inverter. Please note that the battery will first only be approved for On-Grid applications. We expect to formally complete the approval process in CW 47/2025.

Due to the nature of lithium-ion technology and potential risk involved, due diligence is to be given to battery system safety. SMA therefore tests batteries according to predefined test catalogues in our laboratories to ensure safe, stable and reliable operation of qualified batteries with our battery inverters. Finally approved batteries are listed in the document "SUNNY ISLAND X 30 / 50 - Approved batteries and information on connecting batteries". The latest version of the document is available on sma.de in the Download section under Background Information of the Sunny Island X inverter product page.

Disclaimer: SMA cannot guarantee the proper functioning of the batteries in conjunction with Sunny Island X unless they have been fully tested according to our requirements. This means that the SMA Limited Factory Warranty will not cover damage or performance limitations caused by untested batteries.

Sincerely,

J.A. Johannes Kehl
